

Dragon focus on abrasives from sustainable forests

At Dragon we would like to take responsibility for the environment and the world around us. Among the first in the world we are focusing on the origin of the paper in our abrasives through FSC certification.

“Due to that fact that our entire production is based on paper, we found that it is obviously that we should take responsibility for the forests around the world – both in regards to animals, vegetation and humans. That is why we are both proud and inspired, that we have been certified”, states Rikke Bergqvist, Internal Sales & Procurement Manager at Dragon, and she continues:

“At Dragon we are convinced, that there is a huge market for FSC-products with an increasing demand. And because we would like to take co-responsibility for the environment, we have decided to cover the extra costs for the certification, so that our customers will not receive a price increase. Now we are able to deliver a more responsible product at the same competitive price for both existing and new customers”.

The certification opens up new possibilities both through layouts on labelling, and also in the abrasive directly, while we among other things can add the FSC logo on the back of the abrasive.

At FSC Denmark they are happy about the initiative. The leader of the secretariat in FSC Denmark, Loa Dalgaard Worm states:

“We are very happy to get a company like Dragon on the FSC-wagon. They manufacture a long line of paper-based products and they are the first of this kind to be certified. We are looking forward to a solid and future cooperation with Dragon, who has also decided to be a member the FSC network.”

Dragon is the only manufacturer of flexible abrasive products in Denmark. The company was founded in 1890 in Copenhagen. We have been supplying trade and industry with a broad range of ever changing abrasive products for over 80 years. Apart from a small standard assortment, the main part of our production is customized products in standard dimensions.

We have a long experience on the export markets and we currently exports 90% of our sale.
