

Dear Business Partner,

09.04.2026

We are pleased to share an important product improvement with you.

Over the winter, we have further optimized our abrasive paper to deliver even better performance in your daily operations. While maintaining the same trusted raw materials and formulations, we have refined the grain distribution and optimized the glue system.

The result is clear:

5–15% improvement in sanding efficiency and durability.

This means:

- **Faster material removal**
- **Sharper cutting performance**
- **Longer service life**

These enhancements are now being gradually introduced across selected Dragon product lines – **with no increase in price.**

We are pleased to inform you that the upgrade has already been implemented in **Dragon 332 P40**, with additional products to follow.

During the transition period, updated products will be marked with stickers to clearly indicate the new version. Please keep an eye out for these identifiers when receiving goods:

We are confident that both you and your customers will experience the benefits of this upgrade, and we welcome any feedback you may have on the improved product.

Thank you for your continued cooperation.

Kind regards,

 **dragon**[®]
